API 1169

"Pipeline Construction Inspector" Sertikasyon Eğitim Programı

EĞİTİM PROGRAMI

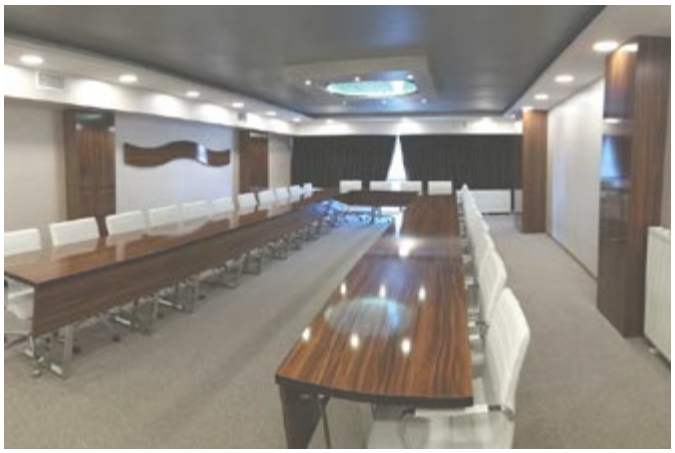
Seçenek 1: Online Eğitim + Katılımlı Sınav Simülasyonu

Atlas Training eğitim alt yapısı ile online eğitim sonrası, sınav salonlarımızda 1+1 toplamda 2 adet sınav simülasyonu yapılacaktır.Sınavlar API sınav sistemi ile birebir aynı olup katılımcılar bilgisayar ortamında sınava gireceklerdir.

Seçenek 2: Katılımlı Eğitim ve Katılımlı Sınav Simülasyonu

Eğitimlerimiz , Yetkili API uzmanı eğitmenimiz ile eğitim salonlarımızda verilmektedir. Sonrasında ınav salonlarımızda 1+1 toplamda 2 adet sınav simülasyonu yapılacaktır.

EĞİTİM LOKASYONU



AVESKON Bostancı Prestij Plaza toplantı ve eğitim salonu

EĞİTİM İÇERİĞİ

"www.api.org" da yayımlanan "Body Of Knowledge" da belirtilen tüm standartlar ve ilgili bölümleri eğitim içeriğini oluşturmaktadır.İçerik ayrıca ek olarak verilmiştir.

Bedel

Seçenek 1: 980 USD + KDV
Seçenek 2: 1350 USD + KDV

Eğitmen

Authorized API 570 Inspector
Önder DEMİRCAN

Eğitim Tarihi

http://www.aveskon.com/aveskon-akademi/egitim-takvimi

Eğitim Süresi

Seçenek 1: Online Eğitim "süresiz" + 2 gün sınav simülasyonu
Seçenek 2: Eğitim "5 gün" + 2 gün sınav simülasyonu

Ek Bilgiler

Eğitim dili : Türkçe - İngilizce
Max. Katılımcı Sayısı: 12

BODY OF KNOWLEDGE
API 1169 PIPELINE CONSTRUCTION INSPECTOR
December 2021 - April 2022 exams

API 1169 Pipeline Construction Inspectors must have a broad knowledge base relating to construction of new onshore pipeline construction. This knowledge base, at a minimum, includes such topics as inspector responsibilities, personnel and general pipeline safety, environmental and pollution control, and general pipeline construction inspection. The API 1169 Pipeline Construction Inspector Certification Examination is designed to determine if applicants have such knowledge.

Candidates will be given three hours to complete the 115-question examination (100 scored, 15 not scored) on a computer. Questions for the examination are multiple-choice and personal reference materials are not permitted to be brought into the computer testing centers. US and Canadian government-based reference materials will be provided to all the candidates during the exam on their computer monitors. Candidates may choose to use either set of references to answer all questions. Please note that the keyword search function (Ctrl + F) is *not* available during the exam. Review the Exam Tutorial provided on API's website for further information regarding the operation of the PDF viewer. Please see page two of the API 1169 Effectivity Sheet for a complete list of the documents that will be available during the exam.

Please note: This exam has been reviewed and approved by Canadian experts for use by the Canadian pipeline industry. When a reference has a Canadian equivalent, (for example API 1104 and CSA Z662-19), candidate may choose to study either the American or Canadian reference(s) with the assurance that exam questions will focus on areas where the technical content overlaps.

Please note that API has chosen to use certain standards and codes as representative of best practices within the pipeline industry. Local regulations may differ and it is the responsibility of the pipeline inspector to know and understand the applicable rules and regulations for the area where the pipeline project is undertaken. For this reason, some questions may only be answered using US OSHA regulations (29 CFR 1910 and 29 CFR 1926). These questions are clearly identified in the exam and will say "according to OSHA" in order that applicants will know to use the OSHA regulations provided during the exam to answer these questions.

To determine whether the applicants have sufficient knowledge of inspection practices and related topics, a minimum of one question from each main category listed within this Body of Knowledge will be included on the API certification examination. Only information covered in one of the referenced materials listed in this body of knowledge will be utilized for the examination questions.

* The Endangered Species Act and 16 U.S.C. Chapter 35 Endangered Species are interchangeable

Canadian documents with (F) listed next to their titles indicates that the document is provided in both English and French during the exam. Please note that not all documents have French translations.

Attention: All examination questions are based on the materials listed above.
The ASME Documents below are recommended for general knowledge but not required for the exam. All exam-related information contained within ASME documents can also be found in API RP 1169

ASME B31.4, Pipeline Transportation Systems for Liquids and Slurries

ATTN: Test questions will only be based on the following portions of the document:

- Chapter I - Scope and Definitions
- Chapter II - Design
- Chapter III - Materials
- Chapter V - Construction, Welding, and Assembly
- Chapter VI - Inspection and Testing

ASME B31.8, Gas Transmission and Distribution Piping Systems

ATTN: Test questions will only be based on the following portions of the document:

- General Provisions and Definitions
- Chapter I - Materials and Equipment
- Chapter II - Welding
- Chapter III - Piping System Components and Fabrication Details
- Chapter IV - Design, Installation and Testing
- Chapter VI - Corrosion Control

EXAMINATION CONTENT BASED ON SPECIFIC AREAS OF KNOWLEDGE AND PROFICIENCIES

The inspector should be knowledgeable of general inspection responsibilities, requirements and expectations for pipeline construction that enable him/her to effectively carry out their duties. The following is a list of topics that an applicant should be familiar with and expect to be tested during the API 1169 Pipeline Construction Inspection exam:

1. Pipeline Construction Inspection/Management Knowledge Areas
    - Quality assurance (records, measurement, documentation)
    - Safety (basic site safety, roles and responsibilities)
    - Environmental (permits, SWPPP, BMP's, etc.)
    - Training and Qualifications

2. Front-end Construction
    - Survey & Staking
    - Line Locating
    - ROW Clearing/Grading
        - Alignment sheets (e.g., extra workspace, PI locations, special conditions)
        - Specifications (e.g., width, right of way, grubbing, topsoil segregation)
        - Permits (e.g., road crossing, road access, railroad, encroachment)
        - Special landowner requirements (e.g., line list)
        - Written and/or electronic reporting

3. Installation Construction
    - Stringing
        - Materials identification (e.g., pipe grade, wall thickness, coating, heat and pipe number)
        - Materials defects / condition
        - Handling requirements (e.g., lifting, loading and unloading, equipment, stacking, securing)
        - Pipe tally / pipe placement (e.g., placed per alignment drawings, seam locations)
        - Specifications (e.g., minimum equipment requirements)
        - Written electronic reporting (e.g., stringing distances and skips, number of joints)
    - Bending
        - Pipe ovality and wrinkles (e.g., CFR192)
        - Proper bending equipment (e.g., liners, mandrels, shoes, angle measurement)
        - Specifications (e.g., bending requirements, tangents, maximum angles, seam alignments, coating or metal damage)
        - Written electronic reporting (e.g., bend location, as built)
    - Welding/NDE
        - Specifications, qualified procedures, qualified personnel, documentation, material/consumable control, testing (equipment and products)
    - Trenching
    - Crossings/Drills
        - Specifications, clearances, type of bores, voids, crossing agreements/permits, cased vs. uncased crossings, pipe condition
    - Coating
        - Specifications, qualified procedures, qualified personnel, documentation, material/consumable control, testing (equipment and products)
    - Padding/Lowering in
        - Proper equipment (e.g., lifting, cradles, slings)
        - Specifications (e.g., spacing, location in ditch, depth, ditch preparation, sandbag placement, benching)
        - Lifting plans (e.g., boom spacing, lift height, boom size, number of booms)

  - Written / electronic Reporting (e.g., amount, damage, holiday detection)
- Tie-ins
  - Specifications (e.g., alignment, OQ)
  - Written / electronic reporting (e.g., location, amount)
  - Material identification (e.g., pipe number, heat number, cutoff length)
  - Material Placement (e.g., transition, pipe support)

4. Back-end Construction

- Cathodic Protection
  - Alignment sheets (e.g., location, type, length)
  - Specifications (e.g., connection, wire size, anode ground beds, size, length, location)
  - Written / electronic reporting (e.g., location, amount, as-builts, type)
- As-built Survey
  - Redline drawings, alignment sheets showing final as built conditions, dimensions, and characteristics of the pipeline (e.g., weld maps/logs, NDE maps/logs, PI/POT locations, depth of cover, test leads, material and coating information)
- Backfill
  - Proper equipment (e.g., type, padding requirements, rock shield, erosion control, weights)
  - Padding pipe (e.g., depth, material size, compaction, foam)
  - Specifications (e.g., padding amount, material size, bench spacing, compaction, crown)
  - Written / electronic reporting (e.g., quantity and location)
  - Buoyancy control (e.g., types, installation, spacing, documentation)
- ROW Clean-up/ Restoration
  - Alignment sheets (e.g., special conditions, mile marker placement, re-vegetation, bank stabilization)
  - Landowner requirements (e.g., damages, special conditions, fences, restoration)
  - Equipment (e.g., LGP, decompaction, seeding)
- Hydrostatic Testing
  - Horizontal drilling process, drilling fluids, drill path/profile, geotechnical studies, pull force, radius of curvature, entry/exit points, entry/exit angles)
  - Testing, gauge plate inspections, deformation
- Pigging (Cleaning/Drying)

5. Post-Construction

- Line List close out
- Final completion assessment/Punch out
- Turn over to Operations
